

Enterprise Software Bottleneck Portfolio – Thesis

This portfolio concentrates on enterprise software companies that control critical bottlenecks in modern technology infrastructure. Holdings are chosen for their dominance in software development, cloud services, security, automation, and developer productivity tools. Each position benefits from high switching costs, recurring revenue, and indispensable enterprise adoption, making them pivotal to the next wave of technology-driven transformation. The portfolio is actively managed, with focus on conviction-weighted exposure rather than broad diversification.

Portfolio Allocation – 15 Stocks

Ticker	Company	Theme / Bottleneck	Rationale	Suggested Weight (%)
MSFT	Microsoft	Cloud / Developer Tools	Dominates enterprise productivity, Azure cloud, GitHub, VS Code; core developer and IT infrastructure platform.	12
GTLB	GitLab	DevOps / CI/CD	Streamlines software development and deployment; centralized DevOps platform.	7
TEAM	Atlassian	Developer Productivity	Jira & Confluence are critical project management & collaboration tools for software teams.	7
NOW	ServiceNow	Workflow Automation	Leading enterprise IT operations and service management platform.	8
SNOW	Snowflake	Cloud Data Platforms	Essential cloud data warehouse & analytics platform; enables enterprise data workflows.	7
OKTA	Okta	Security / Identity	Identity and access management; foundational for enterprise security architecture.	6
CRWD	CrowdStrike	Security / Endpoint Protection	Leading endpoint and threat detection platform; high adoption across enterprises.	6
HCP	HashiCorp	DevOps / Cloud Infrastructure	Provides critical infrastructure as code, secrets management, and cloud automation.	6

Ticker	Company	Theme / Bottleneck	Rationale	Suggested Weight (%)
ESTC	Elastic	Search / Observability	Enterprise search, logging, and monitoring; integral for large-scale software operations.	5
PANW	Palo Alto Networks	Security / Network	Network security leader; essential for enterprise threat prevention.	6
VMW	VMware	Virtualization / Cloud	Core enterprise virtualization & cloud software; backbone of IT infrastructure.	7
DDOG	Datadog	Observability / Monitoring	Cloud monitoring and logging; essential for enterprise software reliability.	5
TWLO	Twilio	Communication APIs	Powers enterprise workflows, notifications, and messaging integrations.	5
ADBE	Adobe	Collaboration / Design	Figma and Adobe design tools are central to product development and collaboration.	5
PATH	UiPath	Automation / RPA	Robotic process automation; bottleneck in enterprise workflow automation.	6

Total: 100%

Notes / Observations:

- Weightings favor platform leaders (MSFT, NOW, TEAM) to reflect high conviction.
- Security (OKTA, CRWD, PANW) represents a critical enterprise bottleneck cluster.
- DevOps / developer tooling (GTLB, HCP, ESTC) ensures exposure to the backbone of modern software development.
- Cloud data & automation (SNOW, DDOG, PATH) positions the portfolio in the high-growth workflow and data layer.
- Collaboration/design (ADBE, TWLO) captures essential productivity and integration tools.
