

Enterprise Software Portfolio – Thesis

AI-Generated Whitepaper · For Informational Purposes Only

This portfolio concentrates on enterprise software companies that control critical bottlenecks in modern technology infrastructure. Holdings are chosen for their dominance in software development, cloud services, security, automation, and developer productivity. Each position benefits from high switching costs, recurring revenue, and indispensable enterprise adoption, making them pivotal to the next wave of technology-driven transformation. The portfolio holds 14 positions and is conviction-weighted rather than broadly diversified.

Portfolio Allocation – 14 Positions

Ticker	Company	Theme	Rationale	Weight (%)
MSFT	Microsoft	Cloud / Developer Tools	Dominates enterprise productivity, Azure cloud, GitHub, and VS Code; core developer and IT infrastructure platform.	12
GTLB	GitLab	DevOps / CI/CD	Streamlines software development and deployment; centralized DevSecOps platform.	7
TEAM	Atlassian	Developer Productivity	Jira & Confluence are critical project management & collaboration tools for software teams.	7
NOW	ServiceNow	Workflow Automation	Leading enterprise IT operations and service management platform.	8
SNOW	Snowflake	Cloud Data Platforms	Essential cloud data warehouse & analytics platform; enables enterprise data workflows.	7
OKTA	Okta	Security / Identity	Identity and access management; foundational for enterprise security architecture.	6
CRWD	CrowdStrike	Security / Endpoint Protection	Leading endpoint and threat detection platform; high adoption across enterprises.	6
ESTC	Elastic	Search / Observability	Enterprise search, logging, and monitoring; integral for large-scale software operations.	5
PANW	Palo Alto Networks	Security / Network	Network security leader; essential for enterprise threat prevention.	6
AVGO	Broadcom	Infrastructure Software	Broadcom's acquisition of VMware created the dominant enterprise infrastructure software stack covering virtualization, networking, and cloud management across private and hybrid clouds.	7
DDOG	Datadog	Observability / Monitoring	Cloud monitoring and logging; essential for enterprise software reliability.	5
TWLO	Twilio	Communication APIs	Powers enterprise workflows, notifications, and messaging integrations.	5

Ticker	Company	Theme	Rationale	Weight (%)
ADBE	Adobe	Collaboration / Design	Adobe design and document tools are central to product development and collaboration.	5
PATH	UiPath	Automation / RPA	Robotic process automation; bottleneck in enterprise workflow automation.	6
Total				100%

Notes / Observations

- Weightings favor platform leaders (MSFT, NOW, TEAM) to reflect high conviction.
- Security (OKTA, CRWD, PANW) represents a critical enterprise bottleneck cluster.
- DevOps / developer tooling (GTLB, ESTC) ensures exposure to the backbone of modern software development.
- Cloud data & automation (SNOW, DDOG, PATH) positions the portfolio in the high-growth workflow and data layer.
- Collaboration / design (ADBE, TWLO) captures essential productivity and integration tools.
- Infrastructure software (AVGO) replaces the now-private VMware, reflecting Broadcom's absorption of the VMware virtualization portfolio into a recurring-revenue enterprise software business.

This whitepaper was originally generated with AI assistance and should be treated as informational content, not investment advice. Allocations are subject to change.

Revision note (2026-06-03):

- VMW (VMware) removed — delisted following acquisition by Broadcom (AVGO) in November 2023.
- AVGO (Broadcom) added at 7% weight to maintain exposure to enterprise infrastructure software via the acquired VMware stack.
