

Healthcare Automation & Innovation Portfolio

AI-Generated Whitepaper · For Informational Purposes Only

Core Thesis

This portfolio is designed around the idea that the future healthcare system will increasingly become automated, data-driven, preventative, and AI-assisted. The portfolio emphasizes companies that own technological bottlenecks capable of reducing labor intensity, improving diagnostic accuracy, accelerating research, and lowering overall healthcare costs. Holdings span clinical automation, diagnostics infrastructure, genomic AI, and biological computation — covering the full stack of healthcare transformation.

Portfolio Composition – 12 Positions

Ticker	Company	Theme	Role in Thesis	Weight
ISRG	Intuitive Surgical	Clinical Automation	Dominant surgical robotics ecosystem with recurring revenue and strong procedural lock-in.	12%
TMO	Thermo Fisher Scientific	Diagnostics Infrastructure	Biotech and diagnostics infrastructure provider enabling scalable biological research.	10%
DHR	Danaher	Lab Automation	Life sciences and diagnostics conglomerate with strong exposure to lab automation.	10%
MDT	Medtronic	Medical Devices	Global leader in medical devices and therapies across cardiac, surgical, and neurological categories, with expanding digital health capabilities.	9%
GEHC	GE HealthCare	AI Imaging	AI-assisted imaging and precision diagnostics platform.	8%
SYK	Stryker	Surgical Robotics	Robotic orthopedic surgery and hospital automation systems.	8%
DXCM	DexCom	Continuous Monitoring	Continuous monitoring and preventative healthcare data platform.	7%
VEEV	Veeva Systems	Healthcare Software	Healthcare-native workflow and regulatory infrastructure software.	7%
TEM	Tempus AI	Genomic AI	Clinical and genomic AI platform built around proprietary oncology datasets.	7%
NTRA	Natera	Liquid Biopsy	Liquid biopsy and genetic testing platform focused on earlier disease detection.	6%
ABT	Abbott Laboratories	Molecular Diagnostics	Abbott's acquisition of Exact Sciences brought best-in-class molecular diagnostics and cancer screening into a global diagnostics infrastructure leader.	4%

Ticker	Company	Theme	Role in Thesis	Weight
RXRX	Recursion Pharmaceuticals	Biological Computation	AI-driven drug discovery and automated biological experimentation platform.	2%
Total				100%

Healthcare Automation Stack

Clinical Automation: Robotics and procedural systems improving precision and reducing labor intensity. (ISRG, SYK)

Diagnostics & Imaging: AI-enhanced imaging and molecular diagnostics increasing detection accuracy. (TMO, DHR, MDT, GEHC, ABT)

Genomic & AI Platforms: AI-driven clinical intelligence and genomic analytics for oncology and precision medicine. (TEM, NTRA)

Healthcare Software: Workflow, regulatory, and healthcare-native cloud systems. (VEEV)

Continuous Monitoring: Wearable and preventative healthcare systems generating longitudinal patient data. (DXCM)

Biological Computation: AI-assisted drug discovery and automated biological experimentation. (RXRX)

Key Risks

- Regulatory delays in AI-assisted healthcare systems
- Hospital capital spending slowdowns
- Reimbursement and insurance policy changes
- Valuation compression across AI-related equities
- Long enterprise sales cycles within hospital systems
- Competitive pressure from major technology firms entering healthcare

Conclusion

This portfolio is structured around the long-term transformation of healthcare into a more automated, precise, scalable, and preventative system. The emphasis is on companies that own critical infrastructure, data, robotics, diagnostics, and software layers capable of materially improving healthcare efficiency and outcomes over time.

This whitepaper was originally generated with AI assistance and should be treated as informational content, not investment advice. Allocations are subject to change.

Revision note (2026-06-03):

- EXAS (Exact Sciences) removed — acquired by Abbott Laboratories (ABT).
- ABT (Abbott Laboratories) added at 4% weight, preserving molecular diagnostics exposure within a larger diagnostics platform.
- SMMNY (Siemens Healthineers) removed — not listed on US exchanges and unavailable via Alpaca data feed.

- MDT (Medtronic) added at 9% weight as the US-listed replacement for broad medical device and digital health exposure.
